HIGH-PERFORMANCE EPDM BELTS
FOR DEMANDING ENVIRONMENTS
For decades, customers have asked for greater temperature range due to high ambient and operating temperatures in many applications. Industry standard v-belts utilize polychloroprene synthetic rubber compounds which limit operating temperatures from -30°F to +140°F.

Our new EPDM (Ethylene Propylene Diene Monomer) Browning® v-belts* expand that temperature range considerably. Operating temperatures for EPDM v-belts are -60°F to +250°F. This expanded range helps ensure long-life and reliable performance even in the most demanding climates and heat sensitive applications.

Don’t Lose Your Cool!

It’s 150°F on your rooftop today. Whose v-belt are you trusting in your high-performance air handler?

Performance you can trust

Browning high performance v-belts are designed to offer long life and reduced downtime - making Browning OEM specified and contractor preferred.

*3VX, 5VX, 8VX, AX, BX (All notched belts)
All the key features you have come to trust with Browning® belts

- **Fabric Top and Bottom**
  Increases rigidity and stability
  Reduces stress on the cord line
  Increases belt life

- **Wider Notch Spacing**
  Increases rigidity and stability
  Reduces stress on the cord line
  Increases belt life

- **Ground Form**
  Lowest CD variation design
  Reduces vibration
  Increases belt and bearing life

- **High HP Capacity**
  The Proven Performer, designed to handle the toughest conditions.

- **Code 1 Matched Belts**
  Designed to exceed the ARPM (formerly RMA) matching limits.

- **Machine Matching**
  Warehouse machine match up to sets of 10 available at no additional cost.

- **Fiber Loading**
  The fiber loaded body is designed for the longest life, flexibility and HP capacity.

- **Tubular Fabric**
  Unique tubular woven knit fabric, designed for maximum flexibility and performance.

- **Oil/Heat Resistance & Static Conductivity**
  Meets ARPM standards for oil and heat resistance as well as static conductivity.

---

**What Is EPDM?**

EPDM or Ethylene Propylene Diene Monomer, is a synthetic rubber compound. EPDM is strong, flexible, and resists decay. It is ozone, oxidation, humidity, and heat resistant. Operational temperature for EPDM v-belts are -60°F to 250°F.

**Advantages**

- Greater operating temperature range
- Increased efficiency up to 3% with 3VX, 5VX, 8VX, AX, BX
- Longer belt life
- Smoother running due to higher tolerance for misalignment

**BX Raw Edge Accelerated Life Testing**

Dynamometer Accelerated load/life test under controlled lab conditions
APPLICATION CONSIDERATIONS

The proper selection and application of power transmission products and components, including the related area of product safety, is the responsibility of the customer. Operating and performance requirements and potential associated issues will vary appreciably depending upon the use and application of such products and components. The scope of the technical and application information included in this publication is necessarily limited. Unusual operating environments and conditions, lubrication requirements, loading supports, and other factors can materially affect the application and operating results of the products and components and the customer should carefully review its requirements. Any technical advice or review furnished by Regal Beloit America, Inc. and/or its affiliates (“Regal”) with respect to the use of products and components is given in good faith and without charge, and Regal assumes no obligation or liability for the advice given, or results obtained, all such advice and review being given and accepted at customer’s risk.

For a copy of our Standard Terms and Conditions of Sale, please visit http://www.regalbeloit.com (please see link at bottom of page to “Standard Terms and Conditions of Sale”). These terms and conditions of sale, disclaimers and limitations of liability apply to any person who may buy, acquire or use a Regal product referred to herein, including any person who buys from a licensed distributor of these branded products.
